

Economics 7350 - Growth and Development II

Prof. Vollrath

University of Houston, Spring 2020

January 29, 2020

Class Structure

This class is for upper level graduate students. Class is in McElinney 212, M/W from 1-2:30pm. My website, which includes a page for this class on which I may post extra material, is at <https://growthecon.com>

The course grade is going to consist of the following:

Fundamental homeworks (40%)

Two short papers (25% each)

Class participation (10%)

There are four homeworks associated with this material. I will distribute handouts with details on each assignment in class, as necessary.

Due Jan 27: (10%) Nested production structures

Due Feb 3: (10%) Aggregation and market power

Due Apr 1: (10%) Night lights map and dataset

Due Apr 22: (10%) Matched Ethnographic dataset

Each calendar day that an assignment is late lowers the percentage you can earn by one. For example, if you turn in the nested structure homework on January 28th, the *best* you can do is earn 9 of the possible 10 percentage points.

The two short papers will be from the two main thematic sections of the class. Ideas for topics are shown in those sections, and I have some write-ups with more detail for those available. These short papers are not entirely original research, but neither are they simply literature reviews. My expectation is that these are roughly 8-10 pages, excluding figures or tables. They both have to be written in Latex.

Due Mar 16: (25%) Structural change or market power short paper

Due May 4: (25%) Institutions, colonization, culture short paper

Course outline

(Jan 13-Jan 29) Fundamentals: The course is going to start with several weeks of work on fundamental tools used in modern growth theory (and other areas like trade and urban economics): heterogenous goods using CES in both discrete and continuous terms, accounting for markups, Stone-Geary and non-homothetic CES income effects, properties of generalized means. And whatever else I find might be useful as we go along.

(Feb 3 - Feb 12) Structural change and growth: One of the central features of economic growth and development is the shift of economic activity out of agriculture, into manufacturing, and then ultimately into services. Those industries tend to have different productivity levels and growth rates, but at the same time we continue to see balanced growth in the aggregate. How do we explain and reconcile these facts?

- **Short paper idea:** Changes in time allocations associated with structural change.
- **Short paper idea:** Relationship of structural change to level of income.
- **Short paper idea:** Structural change within services and manufacturing.

(Feb 17 - Feb 26) Market power and growth: Once we see that market power and allocations can influence productivity, it becomes a candidate for explaining changes in growth rates, such as the recent slowdown in developed country growth. Does this in fact make sense given the data?

- S. Basu (2019). “Are Price-Cost Markups Rising in the United States? A Discussion of the Evidence”. *Journal of Economic Perspectives* 33.3, pp. 3–22
